

# 4 Most Popular Types of Belt Conveyors

## 1 Powered Roller

A powered roller conveyor is a machine that uses a motor to power a belt that transports objects from one place to another.

## 2 Inclines / Declines

Inclines / Declines conveyors are a type of powered roller conveyor that use an incline or decline to move objects from one level to an upper or lower level within a facility.

## 3 Cleated Belt

Cleated belt conveyors use ridges on the belt to grip and move objects. Ideal for when the product must travel on steep slopes or has a slick surface.

## 4 Slider Bed

Slider Bed Belt Conveyors are belt conveyors that use a flatbed and belt to move objects. It works well when you need to carry loose items like broken-down cardboard.
